

On December 5, 2024, Engineer Asad Ahmed, Managing Director of PMDC, inaugurated the Western Hill Model Mine at the PMDC Salt Mines in Khewra, marking a key milestone in PMDC's progress under his leadership.

The mine's first phase began with a capital expenditure (CAPEX) of 20 million and is expected to produce 200,000 metric tons (MT) of salt in the 2026-27 financial year, with a payback period of three years. It will meet international mining and HSE standards.

PMDC's growth, driven by Engineer Asad Ahmed's focus on innovation, is set to achieve further milestones. The Khewra Salt Mines, producing high-quality salt with 98% purity, are also a major tourist attraction.

Under his leadership, PMDC is poised for continued growth and excellence.
